

SESUGH BARNABAS KWAGHMANDE

Junior Data Scientist / Data Analyst

Sunderland, SR4 6UH, United Kingdom | 07344 337464 | sesughbarnabas919@gmail.com
linkedin.com/in/sesugh-barnabas | github.com/Sesugh-dev01 | Portfolio: sesugh-dev01.github.io

PERSONAL STATEMENT

Soon-to-graduate MSc Data Science student at the University of Sunderland, working across the full pipeline — from multi-source ETL and database design to NLP classifiers and deployed ML dashboards. I follow structured methodologies like CRISP-DM so my work is reproducible, fairly evaluated, and understandable to non-technical stakeholders. Seeking a junior data analyst / data scientist role in the UK and open to visa sponsorship (Skilled Worker).

SKILLS

Programming: Python (pandas, NumPy), SQL, Git, Linux

Machine Learning: scikit-learn, Random Forest, SVM, XGBoost, feature engineering, model evaluation (ROC-AUC, F1, R²)

NLP: NLTK, TF-IDF, text classification, LinearSVC, handling imbalanced data

Visualisation & Deployment: Streamlit, Plotly, Matplotlib, Seaborn, FastAPI, Power BI

Data & Databases: ETL/ELT, CRISP-DM, SQLite, PostgreSQL, REST APIs, Docker

Soft Skills: Data storytelling, stakeholder communication, problem solving, attention to detail

EDUCATION

MSc Data Science

University of Sunderland, United Kingdom Expected 2026 (soon-to-graduate)

- Relevant coursework: Machine Learning, Statistics, Databases, Data Visualisation, Programming.

PROJECTS

House Price Prediction — github.com/Sesugh-dev01/house-price-prediction

- Built a leakage-free regression pipeline (scikit-learn ColumnTransformer) on the Ames Housing data — median/most-frequent imputation, scaling, and one-hot encoding across 79 features.
- Compared five models with cross-validation and selected Gradient Boosting, predicting sale prices to within ~£17k (MAE) and explaining ~88% of price variance (R²).

Stack: Python, scikit-learn, pandas, Matplotlib, Seaborn

Titanic Survival Analysis — github.com/Sesugh-dev01/titanic-survival-analysis

- Built and compared classification models to predict passenger survival, with full data cleaning and feature engineering.
- Evaluated models using accuracy, precision/recall, and ROC-AUC, and visualised the key survival drivers.

Stack: Python, scikit-learn, pandas, Matplotlib, Seaborn

Superstore Sales Dashboard — github.com/Sesugh-dev01/superstore-sales-dashboard

- Designed an interactive dashboard tracking sales, profit, and regional performance across multiple categories.
- Surfaced top products and underperforming segments to support data-driven business decisions.

Stack: Power BI / Tableau, Excel

Hospital SQL Analysis — github.com/Sesugh-dev01/hospital-sql-analysis

- Wrote SQL queries to analyse hospital operational data — patient records, admissions, and resource use.
- Used joins, aggregations, and window functions to answer real analytical questions from raw tables.

Stack: SQL (PostgreSQL / MySQL)

Weather App — github.com/Sesugh-dev01/Weather-app

- Built an app that consumes a live weather API and displays current conditions for a searched location.
- Handled API requests, JSON parsing, and error states for a clean, responsive user experience.

EXPERIENCE

Data Analysis Projects (Academic & Self-directed)

University of Sunderland

- Completed multiple end-to-end data projects covering cleaning, analysis, modelling, and reporting.
- Applied machine learning and SQL to real datasets, presenting findings to peers and tutors.
- Published all work to GitHub with documentation, demonstrating reproducible, version-controlled analysis.

CERTIFICATIONS & TRAINING

- Google Data Analytics Professional Certificate (in progress — update or remove as applicable).
- Self-directed training in SQL, Power BI, and Python for Data Science.

ADDITIONAL INFORMATION

Languages: English (fluent)

Work Eligibility: Currently in the UK on a student visa; seeking employer visa sponsorship (Skilled Worker).

Availability: Available for placements, internships, and graduate roles upon graduation.

References: Available on request.
